Title: "Android Application for Medicine Availability and Location Finder"

Abstract

In the recent times, the World Wide web has the drastic effect on the way people used to do the business in a standard way. Individuals can financial institution, oversee ventures, demand various items, and acquire information on an unbounded variety of points on the internet. It is not a good sign that, such a boost to the technique is not contributing to the development and prosperity of the new entrepreneur. It is also disappointing that the pharmacy business failed to take gain of this fortunate ruin to modernize a standard limit —prescription agreement. Various web drug stores provide medium-term delivery, enabling customers to hold a strategic distance from the deferral of regular mail. Web medicate stores can offer protection that is regularly ailing in a standard drug store. In any case, there is need to consider fundamentally the moral standards in the usage of digital drug. The online medical stores have induced administrative and checking activities at the government, and expert affiliation stages. The closeout of e medicines in the global framework is possibly perilous and needs universal guidelines. Here is an outline of online drug stores, their latent advantages, the affiliations engaged with controlling these destinations, and the enormous discussions including on the web drug stores.

Summary

The web has progressed into a self-sorting through media, prepared for different co-activities inside. Now a day's e-commerce websites have large quantity of products consists of cloths, jewellery, footwear and drugs which are marketed and sold.

"A Place to Learn, A Chance to Grow"

Session: 2020-21

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

The main cause of marketing and advertisement of the drugs on electronic platform is the unavoidable competition and boom in the e-economy. The prime reason is the anarchic structure of the e-market which shows on of the type i.e., either quality difficulties or legitimate. Because of the customer, doctor and controller point of view, these kind of extensive challenges are unavoidable. Among the various business practices that are as of now thriving in this condition are e-Pharmacies, giving a unification of items suppose for instance wellness and gloriousness items similarly as doctor prescribed medicines. A couple of pharmacies simply distribute the drugs through a significant prescription, some give online gatherings to embracing and administering medicines, and some allocate medications without a prescription. Number of reasons which compelled the patients to the use of the e-platform looking for therapeutic consideration. It is going as a subsequent feeling or a second expert for distracted patients. Also, into patient issues it offers information, similarly as the prescriptions that could fix them. Now a day there are numerous types of website or e platforms for selling medicines over the internet. In the initial stage, the e-medical stores were had the autonomous Internet association. In such cases, there were no physical drug stores available for the clients to visit. This initial assembling incorporates the pharmacy benefits the managing arm of the prosperity plans. This can also have effect on deliver picked organizations to the non-member beneficiary. Secondly, this e-medical stores can also act as a "ticks and mortar" drug store normally the online piece of a significant drug store chain that has a certifiable client confronting exterior. A couple of chains have procured online associations as a promoting strategy. This type of platforms has given a simple and convenient way to the customers through which they can request for the refill of the medicines. Not only this but the customer has the freedom to request for the delivery of the medicine at the desired location and at desired time through the associated delivery services.

Finally, self-sufficient neighbourhood drug stores have confined frameworks and used to collect the online goals to address their own situations. Some e-medical store Web goals have "computerized specialists," who assess survey patients by methods for Internet correspondence and choose if to endorse sedate drug dependent on this correspondence. The administration and administrations of online pharmacies might be directed completely in one state, may traverse a few states, or might be found seaward.

Title: "Existing Fire Monitoring and Extinguishing Systems in Various Domain Verticals"

Abstract

Fire is one of the most frequently occurring and destructive disasters and it is extremely serious hazard to people life safety. It is an undesirable mishap which emits heat, smoke or flame and gets converted in the huge fire. Over the last few years, the demand of fire safety systems has taken a drastic increase due to the public awareness. The main motivation of this paper is to review the existing fire monitoring and extinguishing systems in various verticals of the working domains. Also, it gives the brief about the design of automatic sensor based fire alerts, and extinguishing system inferring the Artificial Intelligence and machine learning. The system will be able to locate the victim location and intimation to various stations to be included in the fire control the fire exposures. By implementing the proposed system in a particular area, it is possible to spot the fire within small course of time and extinguish it without risking human lives.

Summary

Fire may be a very useful gizmo in human life, it's the foremost common serious hazard that may have a awfully negative effect on humans Fire is one in every of the foremost frequently occurring and destructive disasters and it's extremely serious hazard to peoples life safety. When a hearth occurs, extinguishing a fireplace early is incredibly important. Therefore, Also, fire extinguishers are the primary line of defence and a valuable means of egress during emergency during this paper, we proposed a real-time monitoring device and warning system. The target of this paper is to acknowledge the pressure of fireside extinguisher in smart phone applications Fire extinguishers are vital equipment to stop the massive fires in emergency situations and minimizing the mishaps. This system can detect abnormal and dangerous situation and notify us. This paper establishes the necessities, conditions, design problems, solutions and future plans for the firefighting system. First, we design a system with extinguisher this technique includes structure, avoidance obstacle, software development system, fire detection. We implement some malicious program to detect only fire. In India there are numerous accidents will occur because of fire as a result, automatically detects the fireplace, and sends a tuned in to the user. During this study, we made improvements to the current system. As a result, it became possible to detect a good range of fireplace extinguishing. If an automatic system is created for fire accidents, then we will have an early warning system.

This can be very effective in a very fire accident in industries and residential areas where the fireplace possibilities. For this sends the situation to extinguisher department that would quickly and efficiently find the hearth and suppress it. Effective monitoring, high speed recognition, and extinguishing of fireplace are problems to be proscribed immediately. The automated android application is intended to avoid further spreading of the fireplace that might cause possible human casualties or damage to property and it will help the fireplace fighters to try to their job effectively.

Report

Title: - "Development of advanced drone for fertilizer transportation in agriculture system and security purpose".

Name of Industry:

Live Wire, Nandanwan Nagpur

Objectives:

- To get an efficient solution for payload carrying capacity using UAV (up to the weight of 5kg including vehicle).
- To build a suitable quadcopter with stable flight control.
- To directly increase the life of farmers by increasing the income per area of land.
- To design a mechanism for spraying and controlling various parameters like drone speed, spraying speed control, etc.
- To transport medical product such as blood product, vaccines and other supplies.

Working of Model:

Initially, the drone was originated as a military tool and was given different names such as Unmanned Aerial Vehicle (UAV), Miniature Pilotless Aircraft, or Flying Mini Robots. Nowadays it is being utilized in the business sector, infrastructure sector, farming, security, insurance claims, mining, entertainment, telecommunication, and transport sector, etc. Such a broad application of drones has resulted in a very fast improvement in drone technology, thereby making it more user-friendly day by day.

Nowadays, the application of small unmanned aerial vehicles (UAVs) is growing at a very fast rate in agribusiness.

2020-21

VISION

MISSION

"To develop competent and committed Electrical Engineers to serve the society"

1. To impart quality education in the field of Electrical Engineering.
2. To be excellent learning centre through research and industry interaction.

The drone survey allows the farmers not to keep track of their crops only but also monitor the movements of their cattle. Thermal sensor technology helps find lost animals and detect an injury or sickness. Drones can carry out this function favorably, and this adds comprehensively to the production of vegetation.

The use of Unmanned Aerial Vehicles (UAVs) commonly known as drones have great potential to revolutionize Indian agriculture and ensure country's food security.

After arming the quadcopter, the throttle was raised which made the quadcopter lift off. Then the forward motion was carried out using the receiver. The quadcopter moved left, right, forward and backward depending on the input given to it. All the controls were working properly. The receiver was able to pick up the signal from distance over 50m the sprayer module worked when the channel associated with it was turned on. The quadcopter moved with good stability. The most satisfactory output was that it was very easy to learn to control the quadcopter. Flying it over field and spraying pesticide is easy.

For a large field, a lot of labor is required to spray the field. This would be very expensive for the farmer as he would have to hire a lot of people to spray the entire field. However, with the help of a pesticide spraying drone, a farmer himself can do the work. He wouldn't need the help of other people. So, this means that not only is the quadcopter safe for the farmer but also it will make his farming practices more efficient.

Drone for fertilizer transportation in agriculture system and security purpose

ABSTRACT

The vital source of income in India is Agriculture. The production of crops depends on certain factors like pests, disease, fertilizers, etc. which can be controlled by giving proper treatment to crops. Pesticides may increase the productivity of crops but it also affects human health. So, the main aim of this paper is to design an agriculture drone for spraying pesticides and multitasking system. Pesticides affect the internal secretion and system of the body. The low levels of exposure throughout spraying might have ended up in health effects, chemical exposure will cause a large vary of medicine health effects in the body like the state of mind, reduced speed of response, reduced visual ability, altered or uncontrollable mood. An idea of

design a multitasking drone which will help us not only in agriculture field but also in transportation work, security system and to locate the position through GPS. This paper mainly concentrates on designing a low weight aluminum structure for the drone that sprays fertilizer for farming and transportation system. The proposed system involves designing a prototype that uses simple cost-effective equipment like BLDC motor, ESC wires, etc.

Report

Title: - "Image Processing based smart irrigation cum fertilizer suggester providing easy access using mobile application".

Name of Industries: Live Wire, Nandanwan Nagpur

Objectives:

Irrigation helps to grow crops, maintain landscapes, and revegetate disturbed soils in dry areas and during times of below-average rainfall. In addition to these uses, irrigation is also employed to protect crops from frost, suppress weed growth in grain fields, and prevent soil consolidation.

The primary objective of a smart irrigation system is to go beyond the basic function of water distribution. It encompasses several key goals, including water conservation, precision farming, increased crop yield, and cost-effectiveness.

The objective of this project is to offer assistance to farmers in getting Live Data (Temperature, Humidity, Soil Moisture, Soil Temperature) for efficient environment monitoring which will enable them to increase their overall yield and quality of products.

Working of Model

It has been identified that IoT systems in general produce a huge amount of data because of monitoring varied parameters in real-time and IoT irrigation systems develops big data as well. Understanding the presence of big data, it has become essential and imperative to develop mechanisms that adequately assess and manage the data. That fact that managing big data could be a difficult activity on the whole and may over-utilise nature resources, it has been suggested that there is a dire need of focusing more on sustainable management of big data. Some of the suggestions that have been understood in this regard have been identified to be using blockchain technology, discarding unnecessary data and only selecting the useful information, powering the devices through the use of solar energy, implement clustering

1. To impart quality education in the field of Electrical Engineering.
2. To be excellent learning centre through research and industry interaction.

techniques to lower the overall information volume, employing efficient algorithms and utilising sustainable resources. While big data could be of immense usage in the overall irrigation process, it is highly vital to ensure effective management and control of the information.

It has further been explored that while the collected data from the sensors provide ample information that could be used, the data analysis is critical to optimise the irrigation process in accordance with the weather and crop conditions. Various organisations involved and related to the activity of irrigation are rightly able to gather the required information, but they fail to properly assess the data and deduce the useful outcomes out of it. This inability of analysis acts as a huge barrier in improving work efficiency and lowering the related risks to the activities.

There are various benefits associated with IoT systems in irrigation and some of them could be considered as overall water consumption reduction, high cost-efficiency, high performance efficiency, lesser energy consumption, lesser wastage of crops, and more

Image Processing based smart irrigation System

ABSTRACT

Countries are working into making agriculture more sustainable by integrating different technologies to enhance its operation. Implementing improvements in irrigation systems is crucial for the water-use efficiency and works as a contributor to Sustainable Development Goals (SDGs) under the United Nations specifically Goal 6 and Target 6.4. This paper aims to highlight the contribution of SMART irrigation using Internet of Things (IoT) and sensory systems in relation to the SDGs. The study is based on a qualitative design along with focusing on secondary data collection method. Automated irrigation systems are essential for conservation of water; this improvement could have a vital role in minimizing water usage. Agriculture and farming techniques is also linked with IoT and automation, to make the whole processes much more effective and efficient. Sensory systems helped farmers

2. To be excellent learning centre through research and industry interaction.

better understand their crops and reduced the environmental impacts and conserve resources. Through these advanced systems effective soil and weather monitoring takes place along with efficient water management. Irrigation systems have been determined as positive contributor toward optimized irrigation systems that could enhance the use of continuous research and development which focus on enhancing the sustainable operations and cost reduction. Lastly, the challenges and benefits for the implementation of sensory based irrigation systems are discussed. This review will assist researchers and farmers to better understand irrigation techniques and provide an adequate approach would be sufficient to carry out irrigation related activities.

SUBJECT: Permission to undertake Live Project.

Respected Sir/ Mam,

It is my proud privilege to interact with you as Principal of J D College of Engineering and Management Nagpur. Our institute is presently offering Engineering courses in Information Technology, Mechanical, Civil, Electrical, Electronics and Computer Science.

Few Student of IT Department are Keen interested to Undergo Live Project as a part of curriculum of DBATU. Which Will Provide them Industrial Knowledge and fulfillment of Final year Project in Engineering Course

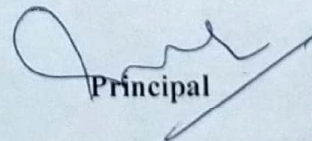

I request you to kindly permit the students to undertake the Live Project in your esteemed organization and provide them necessary information age guidance. The Live project will greatly enhance their understanding of the subjects and give them the desired Industrial exposure.

The name of the student is enclosed herewith.

Thanking you.

Valorization Of Waste Plastic In Concrete Mix (VWPCM)

¹Abdul Monish sheikh, ²Abhay ohekar, ³Pranay borkar, ⁴Deepika kathoute, ⁵Achal wadhwa

¹ Assistant Professor, Department of civil Engineering, JD College Of Engineering And Management, Kalmeshawar, Nagpur -441501, Maharashtra, India.

^{2,3,4,5} B.tech students, Department of civil Engineering, JD College Of Engineering And Management, Kalmeshawar, Nagpur -441501, Maharashtra, India.

Abstract- when we look around us, we can see unused plastic that is accumulated through domestic and industries activities (e.g. Plastic bottles, bags and micro beads) Etc. This waste does not rot because it is non-bio degradable and therefore it remains in nature. In India public organization such as municipal corporations work to collect as well dispose of solid waste and dumped outside at open space far from city which causes air and soil pollution.

To overcome this problem we have suggested using the plastic waste in cement concrete. The ingredients generally used for preparing cement concrete are cement and inert material. the inert material that is fine and coarse aggregate can be replaced by waste plastic. Waste plastic is an inorganic in nature so it does not alter the chemical properties and also it does not affect the consistency and quality of cement concrete.

The waste plastic can be reduced to some extent from the environment as it's used in cement concretes this is a new contribution for future and field of concrete technology. The use of waste plastic in cement concrete replaced 10% to 15 % by weight of inert material will reduced the cost and may increase the quality of concrete.

Keywords: Cement Concrete, Waste Plastic, Aggregate, Cement.

1. INTRODUCTION

In India these days, 0.1 million tonnes' of solid waste is created each day which suggests that correct management of waste is one in every of the main issues we have a tendency to face these days to get rid of such waste. It's calculable that roughly 70% of plastic

packaging merchandise is born-again into plastic waste during a short span. Some styles of plastic don't decompose in the slightest degree. Plastic is employed in packaging, automotive and industrial applications, medical delivery systems, Artificial implants, different care applications, water chemical change, land/soil conservation, flood hindrance, Preservation and distribution of food, housing, communication materials, security systems, and different uses. With Such giant and ranging applications, plastics contribute to associate ever increasing volume within the solid waste stream. Consistent with varied estimates, regarding 60% of plastic waste in Bharat is recycled and 40% of the waste is incinerated or drop within the soil. There's a great deal of effort globally to get rid of plastic waste. In fact, during this project we have a tendency to study the properties of plastic and emphasize however it is often employed in concrete.

Plastic could be a warp material that resists the stress and leads to failures in order that we have a tendency to be exploitation it as a filler material in concrete.

There are two main types of plastics -

I) Thermoplastics which are softened by heat and can be moulded (Injection moulded, blow moulded or vacuum formed). Good examples are acrylic, polypropylene, polystyrene, polythene and PVC.

II) Thermosets which are formed by ha heat process but are then set (like concrete) and cannot change shape by reheating. Good examples are melamine (kitchen worktops), Bakelite (black saucepan handles), polyester and epoxy resins.

We are considering concrete as an answer to plastic concrete could be a material within which if you acquire any ingredient, it'll mechanically enhance its properties the most feature that comes with it's the compressive strength that relying upon its mixing ratio. So we

A Critical Review on Bamboo Reinforced Concrete Beam

Mr. Suraj Sarkar¹

Department of Civil Engineering
JD College of engineering
Nagpur, Maharashtra, India.

Ms. Diksha Chandanbatwe²

Department of Civil Engineering
JD College of engineering
Nagpur, Maharashtra, India.

Mr. Krishna Jadhav³

Department of Civil Engineering
JD College of engineering
Nagpur, Maharashtra, India.

Mr. Vikas Rathod⁴

Department of Civil Engineering
JD College of engineering
Nagpur, Maharashtra, India.

Abstract: In the world concrete is a man-made material. Concrete may be a common artifact within the world, reinforcement utilized in concrete is kind of costly. There's a less expensive reinforcing material which will be utilized in reinforced concrete. For temporary structure and scaffolding, bamboo used as reinforced material. In structural engineering, bamboo is used as reinforced material in concrete. Bamboo contains good water absorption property it's going to cause reduce the mechanical properties and structural failure.

Key Words: Bamboo Reinforcement, Tensile Strength, Water Absorption, Shape of Bamboo, Durability.

1. INTRODUCTION:

Commonly concrete used as a building material, it's very important to create the event of construction, cost-effective material. Because of expensive prices and for low-cost housing and temporary structure steel is very difficult to obtain for developing countries.

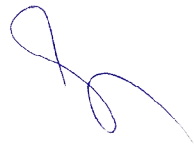

Around the world, many researchers are starting to explore the utilization of low-cost reinforced material as building construction material. Bamboo is one of the important substitutes among all possibilities. Bamboo is the fastest growing plant which we are using as a building material. It is an easily available and naturally growing plant in many parts. Transportation and harvesting cost is very less for bamboo. Manufacturing cost is very less compared to steel. Bamboo encompasses a good lastingness and light-weight weight. Bamboo features a good water absorption capacity it should reduce the mechanical properties and causes structural failure. there's have to control the water abortion of bamboo. there's have to use proper seasoning method to scale back the water absorption.

Bamboo is in a position to resist more tension than compression. the fireplace resistance is extremely good thanks to the high content of silicate acid.

Abstract : In today's era farmers have been facing many problems related to climate change, more production of crops. some times plants can become weak by some diseases, and farmers can not be aware of their plant's growth. To check on the internet of things, the concept helps us to interconnect physical objects equipped with sensing, actuating, computing power and thus lends them the capability to collaborate on a task in unison remaining connected to the internet termed as the IoT. It is placed on the farm field and detects the disease and gives notification to farmers related to the disease on plant leaves and also suggests how to overcome that problem. Farmer also can know about climate conditions before a week or 2 or 3 days. Wireless sensor network (WSNs) acquisition device, environment user-interfaces, and low-cost monitoring system for detecting the various disease in agriculture and farming domain use innovative of automatic learning decision support are proposed to manage the disease detection system. thus, in this paper, future the need to use technology in the agriculture field is easy to know about the climate condition before one month and the growth or health of the plant.

Keywords – Machine Learning, Crop monitoring, weather API, OpenCV.

I. INTRODUCTION

THIS quick development of the web of things(IoT) technologies supposed researchers and developers to suppose new types of smart services that extract knowledge from IoT-generated data. Agriculture is that the backbone of the Indian economy. the most business of Indian people fifty nothing population depends on agriculture. In 1995 "thing to issue " was coined by entrepreneurs, in 1999, IoT (internet of things) was return up by EPC international. The EPC international Network might be a network acquainted with sharing product data between commerce partners. it absolutely was created by EPC international. the premise for the info flow inside the network is that the Electronic Product Code (EPC), EPC is additionally encoded terribly} very Frequency Identification (RFID) tag, however, is not designed fully to be used with RFID data carriers. agriculture science has been operative to evolve technologies in farming the foremost issue moving to a farm is international temperature change, nature of the soil, increment, cuss & diseases. In today's Era the foremost issue inside the agriculture field whether or not or not & climate risk. the management of weather and

climate risk in agriculture has become an important issue because of international temperature change. sheep prediction to all or any or any blocks across & districts inside the country by 2020 and helps as many as 9.5 core farmers cope with the vagaries of weather this paper could be a trial to ascertain the numerous cubic centimetre moreover as IoT techniques applied to the agriculture sector to predict soil condition, weather and various factors moving agriculture. we use the IoT is to sense the gathered data from shut moreover as perform a self-activating perform for the user. IoT in environmental looking helps to know relating to the air and water quality temperature and conditions of the soil and put together monitor the intrusion of animals into the fields. the system uses two footage information one for the work of already keep infected house and completely different for the execution of question image. the project presents disease victimization Associate in Nursing open cv camera system used within the agriculture field. the agriculture analysis of automatic disease sightion is crucial in looking large fields of crops and automatically detect the diseases. OpenCV (Open offer portable computer Vision) might be a library of programming functions within the main aimed toward amount portable computer vision. this project aims to observe diseases on plant AND suggest an improved resolution for healthy yield and productivity of the plant .

II. AWARENESS

To increase information and awareness among farmers to boost the assembly and productivity of assorted crops. To extend information and awareness among farmers to boost the assembly and productivity of assorted crops, the govt of Bharat has initiated varied programmers like Extension through Considering the figures for water crises around the globe, same time its increasing demands in agriculture and plenty of different industries, it ought to be provided to places solely wherever it's required, most significantly, within the needed quantities. For this purpose, enhanced awareness has been enforced to conserve the present under-stress water resources by using additional economical irrigation systems. The history of agricultural development in Bharat shows that Indian Agriculture was unable to feed the forty-five corers. currently, within the twenty-first Century, Bharat will feed its population of quite a hundred corers providing raw materials for consumer goods and industrial functions once an affordable quantity of export. so there's a Brobdingnagian increase within the production aspect in several agricultural commodities however there's no more positive of this within the level of living of farmers.

III. OBJECTIVE

The objective of this analysis paper is to propose IoT primarily based sensible Stick which can modify farmers to own live data of soil moisture, setting the temperature at a really low value so that live observance will be done the objective of this paper is to propose a unique sensible IoT primarily based Agriculture which assisting farmers in getting Live information (Temperature, Soil Moisture) for economical setting observance which can modify them to do sensible farming and increase their overall yield and quality of merchandise .

IV. TOOLS AND DATA COLLECTION

Tools and information assortment Following are the tools and information that we've to attain our framework is as In what follows, we will we'll we are going to place the spotlight are Incorporating the climatically Parameters The weather-based controller additionally called evaporate transpiration controller. On a routine, a lookout or remote weather service monitors conditions like temperature, wind, and wetness. The sensible irrigation controller is soil sensors based mostly business within the root zone of turf plants live the wet level within the soil and transmit this information to the controller These work with high-quality weather sensors, that receive period weather updates and use an equivalent for customizing the irrigation events. Message causing module: APIs for farming, helps to appear at what variety of diseases that plant. whereas genus Apes will trot out a wide-ranging set of information, most farming genus Apes are involved with international information, Regional information, and native information. Database: illustrative pictures of plant diseases particularly helps the professionals committed to agricultural

Principal
J.D. College of Engineering & Management
Khandala, Kato Road
Nagpur-441503

production, as they typically stumble upon plant health issues. The info was additionally created to become a reference for the event of ways to discover and mechanically acknowledge plant diseases. Arduino microcontroller: In Associate in Nursing automatic plant watering system or we will say it sensible irrigation system. we tend to area are unit square live mistreatment Associate in Nursing Arduino microcontroller to manage and sense the factor within the comes like sense or measure the wet within the soil we tend to are mistreatment soil wet detector. Specialized camera: should be able to see live what's happening at the farm by open cv additionally able to access a live icon of detected intrusions from anyplace employing a portable. The project presents plant disease identification mistreatment image process techniques for the machine-driven vision system utilized in the agricultural field. The projected decision-making system utilizes image content characterization and supervised classifier kind back propagation with a feed-forward neural network.

V. RESEARCH METODOLOGY

To enhance the productivity of the crop thereby supporting each farmer and nation we've to use the technology that estimates the standard of crop and giving suggestions

Some disadvantages in communication× should be overcome by advancing the technology to consume less energy and conjointly by creating the computer program easy use

1. **Sensors:wetness Sensor:-** Soil wetness sensors live the water content within the soil. A soil wetness probe is created from multiple soil wetness sensors. One common variety of soil wetness sensing elements in business use could be a frequency domain sensing element like a capacitance sensor
2. **Temperature and wetness Sensor:-**You will live temperature a lot of accurately than employing a semiconductor device. The sensing element electronic equipment is sealed and not subject to reaction, etc. The LM35 generates a better output voltage than thermocouples and should not need that the output voltage be amplified
3. **Water level Sensor:-**Water level sensors× square measure accustomed sight the extent of drugs which will flow. it's accustomed indicate the optimize the extent of water knowledge the info the information} mining technique was applied to research the obtained data for predicting the acceptable temperature, humidity, and soil wetness of crops within the future arrange.
4. The wetness content within the soil was appropriate for the vegetables to be born-again with excellent care reducing prices and increasing agricultural productivity. Moreover, this work is going to be helpful to farmers or those curious about agriculture driving by innovation.
5. **Software:** specialized code solutions that concentrate on specific farm varieties or use case agnostic IoT platforms & Windows nongovernmental organization
6. **Connectivity:** MySQL & Server

Location: GPS, Geotagging

Technology: Open CV, IoT, JavaScript, Ionic, MySQL.

Smart systems accustomed comprehend the health and growth of plants conjointly take the assistance of prediction as a result of farmers can comprehend before one month the weather or climate condition of when one month.

VI. PROCESS DESCRIPTION

The camera we can place on the farm. the placed camera captures the captured image using an open cv plant. That plant can have some diseases by the movement of insects on the plant. that image can compare with an image that can already in the database.

And that notification can give to the farmer by the application that are we make .the name of the disease and how to overcome that disease means the solution can over there by the application .because of that application farmer also know about the climate condition. if after one month the whether can Sunny or rainy that app can also give the information of climate condition.

Principal

VII. ALGORITHM SURVEY

1) K-Mean Algorithm :

- Advantages : 1)Generalizes to clusters of different shapes and sizes, such as elliptical clusters.
2)Choosing manually.
- Disadvantages
1)Difficult to predict K-Value.
2)With global cluster, it didn't work well

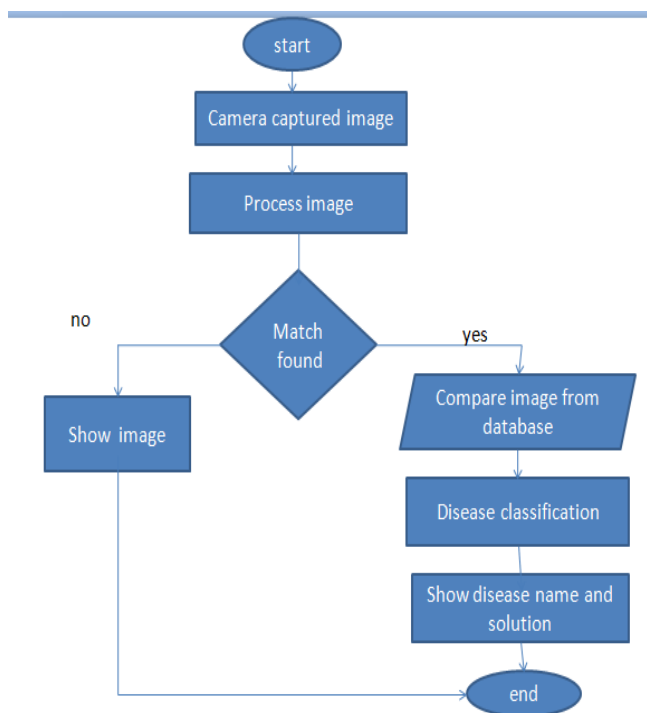

We can not use the k-mean algorithm in our project because this algorithm is used to bifurcate the images.

2) Numpy Pip 3 Algorithm:

- Advantages : One of the main advantages of using Numpy arrays is that they take less memory space and provide better runtime speed when compared with similar data structures in python(lists and tuples).
- Disadvantages : NumPy itself supports “nan” but lack of cross-platform support within Python makes it difficult for the user

We can't used the num py pip 3 algorithm in our project because that algorithm are generally used to manage the in mobile but we are used the cloud computing in our project so no need to use the that algorithm.

3) FLOW CHART

(a)

Principal
D. College of Engineering & Management
Khandala, Kato' Road
Nagpur-441501

4) FUTURE SCOPE

Future work would be centered additional on increasing sensors on this method to fetch additional knowledge particularly regarding pest management and by conjointly group action GPS module during this system to boost this Agriculture IoT Technology to full-fledged Agriculture preciseness prepared product.

Abstract:

Fire is one of the most frequently occurring and destructive disasters and it is extremely serious hazard to people life safety. It is an undesirable mishap which emits heat, smoke or flame and gets converted in the huge fire. Over the last few years, the demand of fire safety systems has taken a drastic increase due to the public awareness. The main motivation of this paper is to review the existing fire monitoring and extinguishing systems in various verticals of the working domains. Also it gives the brief about the design of automatic sensor based fire alerts, and extinguishing system inferring the Artificial Intelligence and machine learning. The system will be able to locate the victim location and intimation to various stations to be included in the fire control the fire exposures. By implementing the proposed system in a particular area, it is possible to spot the fire within small course of time, and extinguish it without risking human lives.

Keywords: We would like to encourage you to list your keywords in this section

Introduction:

Fire may be a very useful gizmo in human life, it's the foremost common serious hazard that may have a awfully negative effect on humans Fire is one in every of the foremost frequently occurring and destructive disasters and it's extremely serious hazard to peoples life safety. When a hearth occurs, extinguishing a fireplace early is incredibly important. Therefore, Also, fire extinguishers are the primary line of defence and a valuable means of egress during emergency during this paper, we proposed a real-time monitoring device and warning system . The target of this paper is to acknowledge the pressure of fireside extinguisher in smart phone applications Fire extinguishers are vital equipment to stop the massive fires in emergency situations and minimizing the mishaps. This system can detect abnormal and dangerous situation and notify us. This paper establishes the necessities, conditions, design problems, solutions and future plans for the fire fighting system. First, we design a system with extinguisher this technique includes structure, avoidance obstacle, software development system, fire detection.. We implement some malicious program to detect only fire. In India there are numerous accidents will occur because of fire As a result, automatically detects the fireplace, and sends an tuned in to the user. During this study, we made improvements to the current system. As a result, it became possible to detect a good range of fireplace extinguishing. If an automatic system is created for fire accidents, then we will have an early warning system. this can be very effective in a very fire accident in industries and residential areas where the fireplace possibilities For this sends the situation to extinguisher department that would quickly and efficiently find the hearth and suppress it. Effective monitoring, high speed recognition, and

extinguishing of fireplace are problems to be proscribed immediately. the automated android application is intended to avoid further spreading of the fireplace that might cause possible human casualties or damage to property and it will help the fireplace fighters to try to their job effectively.

Literature review :

The authors[1] developed the prototype for a fireplace extinguishing robot with a fireplace detecting mechanism that may detect, locate and extinguish fire initially sign of smoke, with a SMS Capability. They have analysed the Delay between the transfer messages from landholder about detection of fireplace and receiving of SMS of the target system. In paper [2], the authors developed a system which will be able to detect a victim place automatically with the help of image processing and the fire will be controlled using web browser. The designed system was very cheap and less space consuming. A real time fire testing platform was introduced in paper [3], for the kitchens. The system was able to detect oil pan fire, kitchen flue fire and cabinet fire tests. The fire was detected through the change and development of temperature, smoke and fire situation. It was very difficult to extinguish oil fire and use of water based devices and dry powder extinguisher was mandatory.

The development of a multiple sensors based asphyxiate robot was proposed in [4]. The developed extinguisher robot was operated in multiple modes using the DTMF and Bluetooth remote additionally as GSM and GPS technology. Robot was designed with three styles of sensors like a flame sensor, smoke sensor, and temperature sensor whereas one or maximum two varieties of sensors was familiarized to implement such quite robot. They analysed that the robot won't stop spraying water until all three sensors respond negatively in order to get away. It could be a common nature of fireside that it can activate anytime if a flammable source is accessible within the incident spot.

The authors [5] developed the system provided at suction ducts at each partition of the train compartment along with CO₂ device for fire suppression. If the temperature goes above 80°C, then the Arduino gives the command to enable buzzer, alerting signal to GSM network, extinguisher. The system was developed with the help of 8 pairs of temperature detectors positioned at the underside of every train cabin windows and a smoke detector positioned at the doorway, which was connected to the pump which continuously sucks the compartment air and offers it to the gas sensor. Signals from the 8 sensors were constantly monitored via Arduino and so the outputs are activated if the harm is detected.

The authors [6] have given a short overview on latest technological improvements utilized within the hearth services. The authors provided four significant fire fighting inventions as Cold extinguisher, sonic device, Drones and Thermal Imaging Camera and analyzed their characteristics within the fire fighting operations. Fire services technological advancements can decrease the danger of injuries and fatalities. In the research [7] the URL address of affected location used to share with fireside control office by GSM module through Google Map to trace the affected location and timely operation is made possible. Presented system was more efficient, robust and low cost comparatively.

An Arduino based automatic fire alarm provider with extinguishing device has been proposed for fire protection [8]. The thermal model of a house was built where smoke detector and temperature sensor assist the flame sensor, which activates above the conditioned artificial environment maintained at 27°C. The author [9] presented the implementation of dual mode firefighting robot. The proposed fire

extinguishing robot works in either automatic or manual mode. The operation of robot is monitored and controlled by Arduino UNO microcontroller. The authors [10] developed the robotic vehicle for spraying of water within the fireplace controlled by voice command. The communication between the vehicle and humans were established through the NODE MCU and ARDUINO. This Robotic vehicle was involved in saving the people and extinguishing the hearth where fire fighters don't seem to be able to enter into the hearth accidental area. The vehicle could control from anywhere by adding GPS module to the robotic vehicle. A CO₂ Extinguisher was mounted to make the robotic vehicle that becomes a sturdy extinguisher. In paper [11], study of the discharge characteristics of the extinguishing agent from device with different configurations of nozzles in a very limited space has been presented, in which a fire extinguishing experiment platform was established. For various convergent nozzles, the larger the taper angle, the upper the diffusion concentration, and thus the higher the discharge effect.

The authors [12] introduced an ultra-fine water mist extinguisher, and studied on total flooding extinguishing test of ultra-fine water mist extinguishing combustion of paper in confined space with the dimensions of 2.4m×2.4m×3.5m. Using the ultra-fine water mist extinguisher in total flooding extinguishing test in confined space to position out paper burning, made up for the deficiency of the related research which only experiment in small space. The authors [13] introduced automatic Fire Extinguishing Hardware based model able to work in fireside accident during fire accident. The robot has been developed which features to manoeuvre within the direction with a regard to the fireside intensity. In the article [14], had a development of fireside extinguishing simulation. They analysed the features of complex adaptive systems theory and simulation of fireplace extinguishing system. The authors [15] proposed an automated vision system for rapid fire onset detection. To stop the born of a mishap, a system constituted by two firewire cameras and a laptop, that manages images from the cameras and remotely controls a fireplace extinguisher, was designed and realized. This technique was helpful for on-line monitoring of possible starting fire in closed environment without the necessity of retrofitting an area to put in a commonly used system.

Safety at transformers and electrical substations of the economic facilities, was an important aspect of minimizing the plant shutdown periods in addition as workers safety [16]. In this event of fireside at a substation or transformer there could be casualties' even worse, fatalities. The legislation burning detection and extinguishing systems for indoor and outdoor transformer, substation and switchgear rooms in Turkey was receptive interpretation. The authors [17] presented the planning methodology and implementation of a coffee cost autonomous robot prototype which detect presence of fireside from its surroundings and take necessary measure to extinguish it. The employed system autonomously detects fire, moves toward it and extinguishes the hearth.

As a summary, it can be concluded that the fire is generated by heating elements and the fire extinguishing robots can help to minimize the mishaps faced because of fire. Fire extinguishers are very important equipment to prevent the large fires in emergency situations and minimizing the mishaps.

Problem Statement :

The older fire extinguishing methodologies were risky to apply and time consuming, As the mishap was to be informed to the fire extinguishing department and the further processing up to loss recoveries. As the world is growing towards the automation of many processes using IOT technologies, fire related

mishaps are also needed to be alarmed by sensing and transmitting the victim information to the destination from where necessary action will be taken by extinguishing unit.

The main aim of the proposed system is to design a low cost and simple wireless Fire protection system against fire outbreak and provide an early notification system to avoid serious damaged due to this type of hazards. Also, the system should be able to react in emergency situation in order to minimize the losses of lives and assets.

Proposed Methodology :

The proposed system can detect abnormal and dangerous situation and notify us. This paper establishes the necessities, conditions, design problems, solutions and future plans for the firefighting system. First, we design a system with extinguisher. This method includes structure, avoidance obstacle, software development system, fire detection et al. We implement some computer virus to detect only fire. We implement the system and if fire accident is true, the hearth extinguisher system can be told the fireplace source by the proposed method and move to fireplace source to fight the fireplace using extinguisher. Device affects on the lives of individuals and other domestic and loss. Smoke sensor:Automatic notification of emergency responders and safety. Monoxide is an odorless and colorless gas, which suggests you will not even bear in mind a controversy is present unless your alarm sounds. Buzzer :Easily compatible, uses lesser energy, high and effective piezo buzzer sound. A buzzer with an occasional power consumption rate is economical since it'll only require less amount of power to operate. High instantaneous sound pressure, Large voltage usage range, Small in size, good frequency response.

- **Wifi module:**Wifi doesn't require a physical cable to attach. Wifi is sweet for device that doesn't have the aptitude of a wired connection.
- **Aurdino kit:**Development of automation system and projects supported code-based control.
- **Android mobile:** Multitasking and straightforward to handle.
- **Fire sensor:**Hydrogen stations,Industrial heating, Fire detection, Fire alarm,Industrial gas, etc.

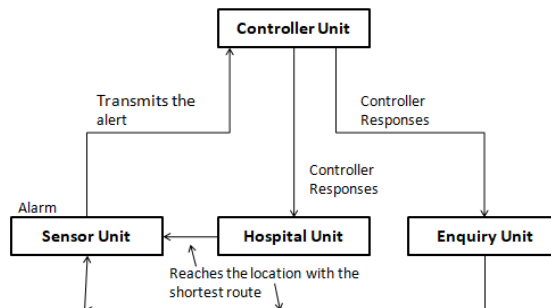

Figure 1. System Design: Alert Module

The proposed automated system will be implemented for automatic intimation of fireside accident with its location, fetched by GPS system to the fireplace extinguishing officer and that they are going to the victim place by the shortest and optimized route. The proposed system are often helpful to avoid and minimized the damages and loss of lives of individuals. The victim place are notify to station house to avoid the mishaps being happened within the nearby crowd. this technique can detect abnormal and dangerous situation and notify us this paper establishes the necessities, conditions, design problems, solutions and future plans for the firefighting system. First, we design a system with extinguisher this method includes structure, avoidance obstacle, software development system, fire detection et al. We implement some computer virus to detect only fire. We implement the system and if fire accident is true, the fireplace extinguisher system can be told the hearth source by the proposed method and move to fireplace source to fight the fireplace using extinguisher. Device affects on the lives of individuals and other domestic and loss.

Abstract: Due to the depleting nature of the present energy sources as well as the increased pollution Renewable energy sources are increasingly used in many applications, solar energy is the best alternative to the conventional energy sources. This paper deals with the event of an easy, profit making, useful, reliable and fuel efficient water pumping system, a DC-DC converter fed to the brushless DC motor (BLDC drive) using the BLDC controller and Arduino which is energized by a photovoltaic array. The behavior of the proposed system is evaluated through a MATLAB/Simulink based simulation study.

Index Terms - Solar Photovoltaic (SPV), MPPT, Converter, Arduino, BLDC Motor.

I. INTRODUCTION

In the Present scenario the energy demand is increasing gradually. But non renewable sources have existed only for a few years, this motivates us to use renewable energy sources. Renewable energy provides reliable power supplies and fuel variation which increase energy security and lower risk of fuel spills while reducing the need for imported fuels. Out of the renewable energy sources, solar PV is becoming the current trend due to its large availability and it is capable to supply the present and future demand. A continuous reduction in the cost of the solar photovoltaic (SPV) panels and the power electronics devices has inspired the industries to utilize the solar PV array generated power for different applications.

As agriculture is one of the important sources for sustainable development, water pumping becoming critical. In remote areas solar powered water pumping is very useful. Water pumping has gained a broad attention as a decisive and cost effective application of the solar PV array generated power. A maximum efficiency of the solar PV array is achieved through a maximum power point tracking (MPPT) algorithm [1-2] using the DC-DC converters. Various DC-DC converters such as buck [3], boost [4], buck - boost [5], SEPIC (Single Ended Primary Inductor Converter) [2-3] have been used for MPPT in different solar PV array based applications.

Abstract - This work propose a review of permanent magnet synchronous motor (PMSM) drive using microcontroller controlled pulses. PMSM has higher efficiency compared to the Induction Motor and Brushless DC motors. To drive PMSM the energy of 3 phase inverter is used, keeping the view the present in this project processes as (SPV) solar photovoltaic powered PMSM. The proposed topology is modelled and it's performance is manifested through simulation using MATLAB.

Index Terms - Arduino UNO, Battery, PMSM Drive, Solar Hybrid Charger, Solar photovoltaic System

I. INTRODUCTION

Solar energy has greatest availability as compare to other energy sources. Solar energy is the most clean energy and easily utilized. The solar energy which is available in our environment can be used to convert into electrical energy by Solar Photovoltaic System (SPV).It is estimated that the earth surface receive 1000 Watts power per square meter during a sunny day. In recent survey the global energy shares of Solar based renewable energy is 24%, although it varies by regions and countries. In India 21.22% energy shares is due to the renewable

SPV motor drives are the better replacement for such motors and also, they are capable of handling such mechanical loads as same as other motors

II. SOME COMMONLY USED MOTORS:

In industries wide varieties of motors are used, the most commonly used motors are as follows-

A. Induction Motor

3 Phase Induction motor is widely used in industries, in which electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. The rotor of induction motor can be either cylindrical or squirrel cage type.

Three phase squirrel cage induction motors are widely used as industrial drives because they are self-starting, reliable and economical. Single phase I.M. are used extensively for smaller loads or household purpose.

Although the Induction Motor has some disadvantages, during the loading condition the power factor of the motor drops at a very low value, the speed control of the Induction motor is difficult to attain because the Induction motor is constant speed motor, it has poor starting torque hence motor cannot be used for application which require high starting torque. Also

Abstract:- Large range of potential use cases are differentiated by later wireless setup. This demands a movable allocation of the accessible time-frequency resources, which is difficult in conventional (OFDM). Hence, adjustments of OFDM, for example, windowing or separating, become vital. Alternatively, we can employ a different modulation scheme, such as Filter Bank Multi Carrier (FBMC). In this we provide a unifying framework, discussion and performance evaluation of FBMC and compare it to OFDM based schemes. Our investigations are not only based on simulations, but are substantiated by real-world tested measurements and trials, where we show that multiple antennas and channel estimation, two of the main challenges associated with FBMC, can be efficiently dealt with. Additionally, we derive closed-form solutions for the signal-to-interference ratio in doubly-selective channels and show that in many practical cases, one-tap equalizers are sufficient.

Keywords:- FBMC, OFDM, 5G.

I. INTRODUCTION

The interest of higher information rates have been expanding radically in the course of recent years. One approach to satisfy this prerequisite is to utilize signals with more extensive data transfer capacity however wideband signals are dependent upon recurrence specific blurring from the multipath channels. In such cases single transporter frameworks are not well. For wideband signals, multicarrier regulation (MCM) is the most conspicuous strategy that can conquer the blurring impact by isolating the wide band signal into a few restricted band flags that can deal with recurrence specific blurring adequately. The MCM plot utilized so far in existing frameworks, for example, Wi Fi dependant on the IEEE 802.11 norm, Wi Max (Overall Interoperability for Microwave Access) in light of the IEEE 802.16 norm, Long haul Development (LTE), LTE-progressed and so on are OFDM based and an enormous body of the writing centers around the utilization of OFDM based multicarrier frameworks for down to earth applications. The enormous fame of OFDM principally comes from various alluring highlights, for example, its heartiness to multipath blurring impacts, its high Unearthly effectiveness (SE) because of the firmly separated symmetrical subcarriers and its capacity to maintain a strategic distance from both automb image obstruction (ISI) by utilizing adequate gatekeeper time and

intercarrier impedance (ICI) by adding a cyclic prefix (CP) in the watchman stretch. Moreover, If the length of CP is more than the greatest channel defer spread, the framework can likewise exquisitely balance a recurrence specific channel with a solitary complex coefficient for every subcarrier. Nonetheless, in spite of its few benefits, OFDM experiences powerlessness to transporter recurrence balance (CFO) bringing about ICI and the utilization of CP not just diminishes the compelling throughput of the transmission yet additionally increments send power. All the more critically, OFDM experiences huge otherworldly spillage because of the utilization of rectangular heartbeat that has helpless recurrence limitation and subsequently require huge watchman groups to ensure close by channels which likewise decreases the SE of the framework. This presents a significant cause of issue that restricts the relevance of OFDM in some present and future correspondence frameworks. The previously mentioned inadequacies limit the use of OFDM as a reasonable waveform for future remote organizations and roused analysts to search for elective arrangements and propose improved actual layers for future remote organizations.

II. FUTURE 5G MOBILE COMMUNICATION TECHNOLOGY

The energizing development of cell phones, workstations, gadgets that associated with the remote frameworks, combined with improved applications are required to go through the additional limit from higher phantom effectiveness and extra range of 4G portable correspondence framework [8]. The future fifth era (5G) versatile correspondence innovation will be carried out with 100-100Mbps client information rate, 20Gbps top information rate and the decrease of dormancy time until 1ms. It gives better inclusion and speed office to clients other than become enormous interest in future. This innovation will create a ultrahigh speed which is feasible to change the importance of phone ease of use. The huge appearances that will captivated individuals is the availability with low inertness, additional gaming alternatives and far reaching media choices with excellent sound and video.

A Smart Switch Control System Using Internet of Things

ABSTRACT

Article Info	As the days are passing, our world is moving towards more technological advancements and soon will become technological oriented. To come up with the upcoming modern and advanced technologies certain small yet basics steps should be taken by one self. In this paper we've presented an Android application and a unit made up of a ESP8266 Wi-Fi module, relay, logic level converter module, capacitive touch sensor module, the Android application is used to control switches using the Wi-Fi technology.

I. INTRODUCTION

In this modern era, we all are dominated by the technology and in this, IOT plays an vital role . The augmentation of the IOT has created new evolution of everything which is connected to the internet . Due to the growth in wireless technology, there are some different of connections are introduced such as GSM, WIFI, ZIGBEE, and Bluetooth. Smart switch systems over the time tried to provide efficient, convenient, suitable and safe way for home resident to access their homes. Changing a conception of security in modern homes has an impact on the advancement of technology.

In our project SSCS using IOT, a smart switch has been created which can be operated by two techniques. Nowadays, users can access and control their homes remotely from anywhere and at any time in the world by connecting modern homes to the

Internet which is very useful and popular. Outback in power usage, price, and capacity of new electronics devices due to an increase in processing power of newly-designed processors.

Firstly we can switch ON/OFF in any device which we have connected through Wi-Fi. Secondly in the absence of Wi-Fi we can handle smart switch manually. IOT devices can be used to observe and control the mechanical, electrical and electronic systems used in various places. (eg., public and private, industrial, institutional or residential) in home and industrial automation system.

II. METHODOLOGY

Features of the system

With the commencement in the twenty first century, the swift among orthodoxy analogue conventions to the improvised effortless process for the same outcomes, in order to make life easy and effortless.

A Review of High Performance Solar Stills for Desalination of Waste Water

Abhishek S. Kagdelwar¹, Pradip S. Mandal¹, Pranjal A. Raut¹, Prachi A. Buchunde², Nazim M. Sheikh³

^{1,2,3,4,5} Department of Mechanical Engineering, JD College of Engineering and Management, Nagpur

Dr. Babasaheb Ambedkar Technological University, Lonare

Abstract: Pure water is renewable resource on the earth, it getting impure now a days. Solar desalination is one of the best way to produce fresh water from any type of impure water in a sustainable way. A solar still is a simply design device used to purify the water by using solar energy by the process of evaporation and condensation. Generally, the productivity of the conventional solar still is about 1-5 L/m²/day. But this quantity is not sufficient for an individual to fulfill daily needs of water in life. Hence either more than 1 L/m² is required per person or better for modifications to improve the solar still design for the demand of the fresh water (likely more than 5 L/m²/day). In this work, an attempt has been made to categorize the different solar still designs with productivity more than 5L/m²/day. Here, we identify as such efficient high productivity of solar stills and discuss their modifications and heat transfer mechanism to reach at useful conclusions. This review will be a reference guide for future researchers who wish to concentrate only on efficient high productivity of solar stills to improve the productivity or efficiency.

I. INTRODUCTION

Water is one of fundamental source for survival of mankind and living things on the globe. Salty water contains dissolved and undissolved substance. But it is not usable for drinkable, so there are various methods which used for the purification of water, one of them is solar still for purification but there is a lot of work need to done on it. In this article to enhance the productivity of fresh water several techniques are mentioned by different researchers. A complete review to enhanced the condensation, evaporation, both condensation and evaporation comparative experimentation of an solar still has been presented. In this present review paper, various methods of improvement works done by researchers have shown, and focused on main primary methods like use of phase change material increased In productivity was 42.2 % to 52.2% , solar parabolic dishes with two identical coned tanks which was gave the more productivity of 40 % to 60% as compared to conventional solar still, black stone as sensible material, parabolic reflector, different types of fins, photovoltaic thermal module, nanofluid of solar still have discussed with increased in productivity . All of above methods are used to increased in productivity and beneficial for improvement in distillate output of solar still. The distillate water can be used for drinking and other household purposes.

The basic objective of this course is to give a solid understanding of the fundamental discipline of thermodynamics, the interrelationships and applications of thermodynamics with other disciplines will be discussed as well. These disciplines are Materials and Structures; Heat transfer; and Fluid Mechanics . The intellectual threads in these disciplines, as well as their combined application to solve engineering Systems Problems will be discussed. This website is also an attempt to consolidate all the best open source resources related to thermodynamics and also act as a repository or place to host all the classwork, [lecture notes](#), [assignments](#), [quizzes](#), [question bank](#); etc. kindly feel free to contact or submit any query.

Strength of Materials

Course Description

This course provides an introduction to the mechanics of solids with applications to science and engineering. We emphasize the three essential features of all mechanics analyses, namely: (a) the geometry of the motion and/or deformation of the structure, and conditions of geometric fit, (b) the forces on and within structures and assemblages; and (c) the physical aspects of the structural system (including material properties) which quantify relations between the forces and motions/deformation

Course Structure

Lectures Each week there will be lectures as per DBATU scheme. Attendance at lectures is mandatory. Recitations Each week, students will meet for a 1.5-hour recitation section consisting of group of students having 8-10 members. Attendance during these sessions is mandatory. The recitation sections will consist of additional discussion of course material, examples and experiments. These sections serve three main purposes:

Subject Name: - Organizational Behaviour

Assignment: 2020-21

=====
All Questions are Compulsory:

Q.1. Himalaya wants to open a new departmental store in lonara, rural Nagpur, As a Consultant head suggest best organization design for Himalaya along with suitable reason.

Q.2. Dabur one the leading firm in India wants to hire store managers for their departmental stores as a HR head what component of individual behavior will be very important for hiring? Discuss

Q.3. HDFC Standard Life Insurance appointed new sales team leader for vidharbha region. As a new comer he not only look after to his team performance but also maintain the growth in the sales. Suggest what steps would he apply to motivate his employees so as to maintain the performance as well the growth of HDFC SLI.

Q.4. VIP is a newly registered trust working in a society with the objectives to educate poor children in rural Nagpur. As a member of VIP trust, what are the various stages of Group Development that you will go through while working?

Q.5. Coming together is a beginning, keeping together is progress, and working together is success". Analyze the above statement highlighting the importance and benefits of teamwork in a startup

Q.6.. Maruti Suzuki is planning to launch its new "SUV M500" in Indian market. A conflict has arisen between two senior members of the marketing department on the issue of media to be used for promotions. This has created a problematic situation for the subordinates to work. State and explain what all techniques can be used to resolve this conflict.

Q.7. Explain the various causes for change in organization and Demonstrate how Globalization & Workforce diversity has forced to bring the change in an Organization.

Dear SURAJ,

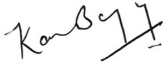

I am delighted & excited to welcome you to Whitehat Education Technology Private Limited (WhiteHat Jr.) as an Intern - Pre Sales in the Slot Booking department. At WhiteHat Jr. we believe that our team is our biggest strength and we take pride in hiring ONLY the best and the brightest. We are confident that you would play a significant role in the overall success of WhiteHat Jr. and wish you the most enjoyable, learning packed and truly meaningful internship experience with WhiteHat Jr.

Your internship will be governed by the terms and conditions presented in Annexure A.

We look forward to you joining us. Please do not hesitate to call us for any information you may need. Also, please sign the duplicate of this internship letter as your acceptance and forward the same to us.

Congratulations!

For **Whitehat Education Technology Pvt. Ltd.,**

WHITEHAT EDUCATION TECHNOLOGY PRIVATE LIMITED

Registered Office Address: 02B-139,Wing-A, 2nd Floor, WeWork Chromium, Near L&T Flyover, Milind Nagar, JVLR,
Mumbai- 400072, Maharashtra, India. email: info@whitehatjr.com CIN: U74999MH2018PTC315690

Annexure A

You shall be governed by the following terms and conditions of service during your internship with WhiteHat Jr., and those may be amended from time to time.

1. You are being hired as an Intern - Pre Sales in the Slot Booking department. You would be assigned a mentor during the internship. Your project would involve learning the pre-sales process and you would also be responsible to aid the pre-sales process in the company
2. You will be provided Twelve thousand (INR 12000/-) for 26-04-2021 to 31- 07-2021 monthly as a stipend. Any period of epidemic/pandemic and force majeure will not be computed for continuity of service under applicable Labour and Employment Laws
3. Your date of joining is 26-04-2021 and the duration of the internship would be up to 26-04-2021 to 31- 07-2021 monthly and may be extended till further period as per the business requirement and upon your successful completion of internship project
4. During this tenure you are expected to devote your time and efforts solely to WhiteHat Jr. work. You are also required to let your mentor know about forthcoming events (if there are any) in advance so that the internship project can be planned accordingly
5. You would be required to be available for this project 9 hours per day, where these 9 hours would be assigned anytime between 9:00 AM to 9:00 PM. Week off will be given as per the roster that you would be assigned to by your respective mentor
6. You would be eligible for a leave of one day after every 30 days of internship completion. No additional leave is allowed during this internship period
7. You will be part of this internship project remotely/physically on an office basis business requirement during the internship. There will be catch-ups scheduled with your mentor to discuss progress and overall internship experience at regular intervals
8. All the learning that you will produce at or in relation to WhiteHat Jr. will be the intellectual property of WhiteHat Jr.. You are not allowed to store, copy, sell, share, and distribute it to a third party under any circumstances. Similarly, you are expected to refrain from talking about your learning in public domains (both online such as blogging, social networking site and offline among your friends, college, etc.) without prior discussion and approval from your mentor
9. We take data privacy and security very seriously and it will be your responsibility to maintain the confidentiality of any students, customers, clients, and companies' data and contact details that you may get access to during your internship. WhiteHat Jr. operates on the zero-tolerance principle with regard to any breach of data security guidelines. At the completion of the internship, you are expected to hand over all WhiteHat Jr. data stored on your Personal Computer to your mentor and delete the same from your machine
10. During the internship period, you shall not engage yourself directly or indirectly or in any capacity in any other organization (other than your college). In the event of a breach of this condition, this offer is liable to be terminated forthwith by the company. In addition, you shall be liable to pay liquidated damages to the Company of an extent estimated by the Company
11. At any point during your internship the company or you may terminate this association by providing a notice of 14 days without assigning any reason. However, the company may terminate this agreement forthwith under situations of in-disciplinary behaviors and/or Zero tolerance activities and/or violation of the code of ethical business conduct of WhiteHat Jr
12. You are expected to conduct yourself with the utmost professionalism in dealing with your mentor, team members, colleagues, clients and customers and treat everyone with due respect
13. WhiteHat Jr. is a start-up and we love people who like to go beyond the normal call of duty and can think out of the box. Surprise us with your passion, intelligence, creativity and hard work – and expect appreciation & rewards to follow
14. Expect constant and continuous objective feedback from your mentor and other team members. we encourage you to ask for and provide feedback at every possible opportunity. It's your right to receive and give feedback – this is the ONLY way we all can continuously push ourselves to do better
15. Have fun at what you do and do the right thing – both the principles are core of what WhiteHat Jr. stands for and we expect you to imbibe them in your day to day actions and continuously challenge us if we are falling short of expectations on either of them
